

Current Opportunity

Submitted by:
Sanguine Biosciences

Details

We are contacting you today to inform you of an opportunity to help advance research for Progressive Familial Intrahepatic Cholestasis (PFIC). The PFIC Network is working with Sanguine, a provider of at-home clinical research services, to connect you and your child with the opportunity to contribute to the development of new PFIC treatments from home.

Participation is easy and done completely in the comfort of your own home. A small blood donation is required for the study, and a mobile medical professional will work around your schedule to meet you in your home to perform the blood draw.

With any concern regarding the spread of COVID-19, all mobile medical professionals will be provided personal protective equipment (PPE) including gowns, face masks, gloves, hand sanitizer, and alcohol wipes in order to protect our participants and staff against the spread of the virus.

You will receive **\$200** compensation as a thank you for your time.

You may qualify to participate if your child:

- Is between the ages of 2-17
- Is diagnosed with Progressive Familial Intrahepatic Cholestasis Type 2
- Lives in the U.S.

To learn more or sign up, visit <https://patients.sanguinebio.com/pfic-study/> or call **(818) 804-2462** to speak with a research coordinator and see if this opportunity is for you.
